EXPERIENCE

Deloitte - Government of California State

June 2024 – Present

Software Engineer (C# .NET 8, Python, TypeScript, AWS Bedrock, Amazon Aurora, Docker)

- Users needed plain-language answers about pending tasks instead of manual lookups, so built a RAG chatbot on AWS Bedrock - Python for retrieval, Amazon Aurora with pgvector for similarity search, TypeScript/React for the front end. Cut related support tickets.
- Addressed scalability limits across 30+ ERP/SaaS integrations, architected high-performance RESTful APIs and C# .NET background services for multi-tenant identity governance, reducing API latency by 42% and supporting 200,000+ monthly audit transactions.
- Redesigned monolithic backend components into C# microservices containerized with Docker and Kubernetes, reducing system downtime by 45% and enabling scalable deployment.
- Established automated testing suites spanning unit, integration, and regression coverage, reducing production software bugs by 65%.
- Led Git version-control workflows and design reviews across cross-functional Agile teams, cutting feature cycle delivery time by 2.5 weeks.

University of Massachusetts, New Bedford, MA

Jul 2022 – Apr 2024

Software Engineer (React.js, .NET, SQL)

- Architected a TurboTax-style web form using .NET, SQL Server, and React to streamline the degree-tracking process for students, eliminating 35%+ of manual data-entry workload.
- Integrated MongoDB alongside MS SQL to handle unstructured legal documents and audit trails, expanding data-ingestion capacity 3x with zero performance degradation.
- Automated advisor approval workflows and SQL-based BI reporting, improving application efficiency by 25% and saving 4+ hours per week in admin work.

Yardi Systems, Pune, India

Nov 2018 – Aug 2021

.NET Developer (Angular, C# .NET, MySQL)

- Refactored SaaS APIs in C# .NET, achieving 80% code reuse and reducing average latency from 50ms to 37.5ms via an Azure DevOps CI/CD pipeline.
- Designed and deployed full-stack C#, .NET, and JavaScript applications on AWS for expanding Real Estate & Construction data demands, boosting platform reliability to 99.99% uptime.
- Automated legacy data migration using a C# .NET module, saving 40+ hours per month in manual work.

PROJECTS

AI Delivery Copilot | *React, TypeScript, Node.js, PostgreSQL, AWS Bedrock, LLM Orchestration*

- Designed and shipped an agentic planning workflow that reasons over product notes and repository context to plan and generate multi-step, schema-validated outputs (sprint objectives, user stories, QA checklists), with human-in-the-loop approval gates before export to production systems, cutting plan-to-ticket turnaround by 70% and tripling sprint-ready artifact throughput.

ReadyCV | *React, Python, FastAPI, PostgreSQL, AWS Bedrock, RAG*

- Built a retrieval-augmented agentic pipeline that grounds LLM outputs in resume and job-description context, combining RAG retrieval, automated ATS-alignment scoring as an evaluation signal, and factuality-aware rewriting to reduce hallucination, cutting tailoring time from ~2 hours to under 20 minutes and improving keyword-match coverage by 35%.

SKILLS

- **Languages:** C#/.NET 8+, Python, Java, JavaScript, TypeScript, SQL
- **AI/ML:** AWS Bedrock, Retrieval-Augmented Generation (RAG), LLM Orchestration, Prompt Engineering, LangGraph
- **Cloud & Infrastructure:** AWS, Azure, GCP, Docker, Kubernetes, CI/CD, DataDog
- **Frameworks & Data:** React, Angular, .NET Web API, Entity Framework, PostgreSQL, MongoDB, Redis

EDUCATION

University of Massachusetts

Sept 2021 – Aug 2023

Master of Science, Computer Science

GPA: 3.77/4
